

# Screen Recording Alternatives

CIT continually receives feedback about alternatives, particularly about recording slideshows directly.

Support for these are provided by the software companies directly.

Here are a few methods:

## Windows

- PowerPoint
  - [Record slideshow](#) then
  - [Save presentation as video](#)

## Mac

- Keynote
  - [Record a self-playing narration](#) then
  - [Export your presentation in another format \(QuickTime\)](#)

PowerPoint for Mac

- 2016 - there is **no save presentation as a movie file** feature
- 2011 - save presentation as a movie file **does not include recorded narration (refer to notes)**
- in short, recording then exporting a video is **not possible** in PowerPoint for Mac.
