Anderson Junior College

---AJC's intra-net (IVLE: Integrated Virtual Learning Environment as well as SchoolBUZZ) allows its students to learn and interact actively in the comfort of their own homes. Teachers can communicate effectively and share information and materials with their students effectively through the IVLE. Making announcements, giving out handouts and other study materials (such as past year examination scripts, answers, readings, news articles etc), assessments and discussions can be done effectively and conveniently without having the hassle for teachers and students to make arrangements for meetings in school. Students can also clear their doubts by airing their views and problems on the school's IVLE's forum. Their teachers and fellow peers would then be able to give suggestions, solutions or constructive comments to those problems on the forum. Announcements can be made and read by both students and the teachers easily through the use of the intra-net. In this case, even if students were to miss out on any verbal announcements in school, they are able to refer to this announcement page on the intra-net to clear any doubts. (Below are some screenshots from the intranet, click to enlarge.)

The screenshot below shows a student's workspace when he/she log into AJC's IVLE. In this workspace, there is a list of channels (“My Courses”) that the student can enter, so as to acquire information and other academic materials for different courses and subjects. Different courses on the IVLE are managed by the respective subject teachers.

Here are the screenshots of the online assessments that can be done by an AJC student through IVLE,
Any wrong answers given by the student when attempting the online assessment, instant feedback and explanation would be given as shown in the screenshot below.

Also, when in face with difficult jargons in their disciplinary, students can easily looked them up in the glossaries (screenshot below) provided on IVLE (that are more accurate and in line with the exams that they will be seating for, rather than searching for the broader definitions available on the world wide web).

Also, teachers are able to receive feedback from their students through online surveys that can be done on the intranet (SchoolBUZZ). Not only can they save resources without having to print the surveys on papers, online surveys are basically more instantaneous whereby, after the students are done with the survey after the survey's deadline, results can be immediately computed without having to collate it manually.
