

# Transferring 360 footage from GoPro Fusion to your computer

 Download and install the GoPro Fusion Studio software before proceeding further. This is required to process your 360 content.

1. Go to the [Fusion Studio page](#) on the GoPro website, scroll down to the Fusion Studio section and click "Learn more".
2. Click the appropriate download button for your operating system.
3. Run the downloaded setup file and install all the accompanying plugins.

[Click here](#) to refer to GoPro's documentation for the Windows installation of GoPro Fusion Studio.

[Click here](#) to refer to GoPro's documentation for the Mac installation of GoPro Fusion Studio.

Users can also instead import directly from their camera into Fusion Studio via usb connection. However, if your camera runs out of battery during the import process, this may run the risk of corrupt or incomplete data.

For this guide, we will cover transferring the footage via microSD cards/SD adapter.

## Transferring 360 Content from GoPro Fusion

1. Insert your SD card into your computer via SD card adapter.
2. **(Recommended)** Choose a preferred location on your hard drive and create a GoPro Fusion overview folder which will contain all of your footage.
3. Under this new Fusion folder, create sub-folders which represent each of your different sessions.
4. Copy the ENTIRE **100GBACK** and **100GFRNT** folder from each of your SD cards into the session folder. **DO NOT delete any of the LRV/THM files on your SD cards.**

This is how your folder structure should look like at this stage.

↑ > My GoPro Fusion Footage > My First Test

Name	Date modified	Type
100GBACK	20/2/2018 2:53 PM	File folder
100GFRNT	20/2/2018 2:54 PM	File folder

It is recommended to follow this structure of organising your 360 footage.

Failing to do so will result in Fusion Studio being unable to detect the content to process.
