

# Climate Change and ICT Report

## Prelude

Steve Howard, CEO of [The Climate Group](#) says: "The ICT sector is rapidly growing and energy dependent. If the sector gets it right, it can achieve sustainable growth and deliver smart solutions that will help enable the low carbon economy."

Luis Neves, Chair of the [GeSI](#) initiative, says: "IT and communications companies are looking for the best way to take responsibility for the future. This study will provide the definitive scientific evidence we need to choose the right course and play a positive role in climate change solutions. This is an excellent opportunity for the IT industry to examine how the application of IT can, not only deliver energy savings and carbon reduction, but do so in a way that drives even greater economic growth and productivity." ([SMART 2020](#))

### Navigation Pane

1.	<b>Climate Change</b>
1.1	Definition
1.2	Causes
	1.2.1 Natural Factors
	1.2.2 Human Factors
1.3	Impacts of Climate Change
2.	<b>ICT as a Solution to Climate Change</b>
2.1	Achieving a Green Business through ICT
	2.1.1 ICT in Manufacturing Sector
	2.1.2 ICT in Transport Sector
	2.1.3 ICT in Building Sector
	2.1.4 ICT in Power Sector
	2.1.5 Case Studies
2.2	Role of the Internet in Promoting Green Awareness
	2.2.1 Government Websites
	2.2.2 Other Internet Mediums
2.3	Other Spinoffs from the Advancement in ICT
	2.3.1 Change in Working Styles
	2.3.2 Change in Lifestyles
	2.3.3 Change in Teaching and Learning Styles
3.	<b>Limitations of ICT in Fighting Climate Change</b>
3.1	Freedom of Expression
3.2	ICT's Two-fold Role
3.3	Inability of ICT to stand as an Independent Solution
4.	<b>Ongoing Research and Development of ICT in fighting Climate Change</b>
4.1	Symposium
4.2	Conference Talk
4.3	Progress
5.	<b>Quotes on ICT and Climate Change</b>
5.1	Quotes
6.	<b>References</b>
